Grand Rounds on Subcutaneous Ureteral Bypass (SUB) Comprehensive Multidisciplinary Approach

Date: Wednesday March 19, 2025
Time: 6:30 - 8:30 PM MT
Location: CARE Centre classroom

CARE GRAND ROUNDS

We are pleased to invite you to our upcoming Grand Rounds, where we will be focusing on the comprehensive management of Subcutaneous Ureteral Bypass (SUB). This session will offer insights from multiple specialties, providing a holistic view of patient care from diagnosis through postoperative management.

Part 1: Subcutaneous Ureteral Bypass (SUB)

A multidisciplinary discussion will explore key aspects of managing a patient undergoing SUB, with contributions from:

- **Internal Medicine:** Focus on the patient's clinical presentation, history, and initial diagnostic workup.
- **Surgery:** Key surgical interventions, particularly for the SUB placement.
- **Imaging:** The role of diagnostic imaging in identifying the location of ureteroliths, also capturing images with fluoroscopy when SUB placement
- **Critical Care:** Discuss the Critical Care team's involvement in perioperative management and intensive monitoring for SUB patients and those with complications.
- **Anesthesia:** Insights into anesthesia management for patients undergoing surgical intervention with co-morbidities.

This multidisciplinary approach will help ensure an integrated and well-rounded perspective on managing patients with Subcutaneous Ureteral Bypass, addressing both medical and surgical challenges as well as optimizing recovery and outcomes.

Part 2: Q&A Session

A dedicated time for referring clinicians to ask questions about their own cases. Our panel of specialists will provide guidance and recommendations for a range of clinical scenarios.
